Abstract of the Disclosure

This invention provides a contact lens selling system which can retain the safety of the contact lens at all hours. The contact lens selling system is comprised of a communication network and plurality of information processing apparatuses connected through the communication network. Plurality of information processing apparatuses are comprised of at least one of a first information processing apparatus, a second information processing apparatus and a third information processing apparatus. The transmitting/receiving means of the first information processing apparatus is a means for transferring information on the registration number, specified department of ophthalmology, contact lens price and the money paying deadline to the second information processing apparatus, and is a means for transferring information on registration number and name to the third information processing apparatus. The transmitting/receiving means of the second information processing apparatus is a means for transferring information on the contract application to the first information processing apparatus. The transceiver means of the third information processing apparatus is a means for transferring information on registration number, name, selling date, contact lens information and eyeball diagnosis information to the first information processing apparatus.
